

# HOTMAX

## FUEL LOGS

### Natural Clean Efficient High Energy Briquettes for the Home

HOTMAX Fuel Logs are an ideal source of fast, efficient, clean and sustainable heat for the home.

As the cost of traditional sources of heating go on spiralling upwards, HOTMAX Fuel Logs offer a cost-effective alternative that's clean, convenient to handle and store, and readily available.

HOTMAX Fuel Logs are made from 100% natural softwood dust, compacted into dense, solid briquettes that burn with very low emissions and leave a very low ash residue.

HOTMAX is the ideal fuel for

#### WINTER

- Woodburners
- Multi-Fuel Stoves
- Open Fires

#### and SUMMER

- BBQs
- Chimeneas
- Camping
- Caravanning

# HOTMAX HIGH ENERGY FUEL LOGS

## Competitive Performance and Cost

In heat generation and price, HOTMAX performs mid-way between coal and seasoned firewood.

Coal: (anthracite) **25-26MJ/kg**

HOTMAX: **17-18MJ/kg**

Firewood: **9-13MJ/kg**

**20Kg**  
bag

## Consistency

The type and quality of coal and firewood can vary, and their performance will vary accordingly.

HOTMAX Fuel Logs provide reliably consistent performance from every bag.

## Unbeatable Practical Benefits

In terms of cost and performance, HOTMAX offers highly competitive value for money. Its unbeatable added value lies in the unique combination of advantages that HOTMAX offers users compared to traditional fuels:

- Clean and easy to handle
- Small and compact
- Fast and easy to light
- Stable and safe in the fireplace
- Dependably consistent quality
- Reliably consistent performance
- Very low ash residue
- Very low emissions

# Natural Clean Convenient Efficient

## Technical Details

Moisture Content: **7%**

Ash Content: **3%**

Energy: **4.7KWh/kg**

Net Calorific Value: **17MJ/kg**

Measurements are approximate and may vary slightly.

## 100% Natural Wood

HOTMAX is made from compacted, natural, unadulterated, recycled softwood dust and particles, including the thousands of tonnes of dust we extract in the manufacture of BEDMAX shavings, our leading brand of horse bedding.

**10Kg**  
bag

## Availability UK-Wide

HOTMAX Fuel Logs are available from retailers throughout the UK in 20kg and 10kg bags.

## Made in Britain

We make HOTMAX at our three shavings production plants in Northumberland, Nottinghamshire and Hampshire. All the timber we use in our production processes is sourced from sustainably managed British forestry.

## No Resin Build-up

Wet or damp firewood has a low calorific content and tends to burn at a temperature that is too low to combust its resin content. Instead, the resin will evaporate, and then condense and solidify in the colder environment of the flue or chimney.

HOTMAX fuel logs generate high levels of heat that burn off any resins or other natural residues, so HOTMAX will not cause the accretion of resin or tar in flues and chimneys.

## Fast High Heat

With a very low moisture content and high calorific value, HOTMAX Fuel Logs are very easy to light and will generate high levels of heat very quickly.

**WARNING:** The levels of heat that HOTMAX can generate are so high that we warn new users to begin with small amounts until they are familiar with its performance.

## Tips for Firelighting

HOTMAX briquettes come in a 'log' shape, and each bag contains a variety of random sizes. We recommend that you use a few of the smallest sized fuel logs to light a fire.

You can easily break the larger logs into smaller sizes if you need to.
